Commercial and In Confidence

The information contained in this document is confidential. No part of this document may be reproduced, disclosed to any third party, or issued in any form or by any means with the express written permission of P2P Mailing Ltd.

3. Introduction

3.1 Document Purpose

This document is intended for Trak Pak clients who wish to integrate the Store Locator Widget in to their website for the purpose of selecting a delivery point for a shipment.

4. Destinations

4.1 Supported Countries

The Store Locator Widget currently supports the following Countries.

Australia
Austria
Belgium
France
Hong Kong
Israel
Luxembourg
Netherlands
Portugal
Russia
Spain
Ukraine

4.2 Supported Agents

The Store Locator Widget currently supports the following Agents.

Austrian Post	Austria
Boxberry	Russia
Correos	Spain
CTT	Portugal
Israel Post	Israel
Mondial Relais	Belgium
Mondial Relais	France
Mondial Relais	Luxembourg
Nova Poshta	Ukraine
Parcelpoint	Australia
PostNL	Netherlands
Royale 7/11 HK	Hong Kong

5. The Store Locator

5.1 Integrating the Store Locator into your website

In order to display the Store Locator on your website you will need to construct the URL. The URL is made up of the following components.

Base URL

<https://www.trakpak.co.uk/storelocator>

Destination Code

The destination code controls the Country you wish to show pickup points for and also which delivery partners are displayed. Speak to your account manager if you are unsure which codes you should use.

This example uses FR for France (see section 6.1 for a list of codes).

Zip Code

This example uses 91300

By adding these components together, you build a URL that looks like this:

<https://www.trakpak.co.uk/storelocator/FR/91300>

In the example below, we load this URL into an iframe over the top of the checkout. The customer can browse and select a pickup point that is convenient to them. At the point the customer clicks select on a particular store, the PUDO page sends a 'window.message' back to the calling page that is listening for an event (window.addEventListener).

Note: For countries that use a 2-part zip code such as '4780-001', use only the first section within the URL:

<https://www.trakpak.co.uk/storelocator/PT/4780>

5.2 Example

```
<!DOCTYPE html>
<html>
<head>
<script src="http://code.jquery.com/jquery-1.11.2.min.js"></script>
</head>
<body>
<button id="myBtn">Select a Pickup Point</button>
<p id="demo">
<p id="pudoSearchDialogue">
<p id="is-sl-storeid">
<p id="is-sl-address">
<p id="is-sl-service">
<script>
document.getElementById("myBtn").addEventListener("click", myFunction);

function myFunction() {
var searchUrl = "https://www.trakpak.co.uk/storelocator/FR/91300";
var iframe = '<iframe id="is-sl-iframe" src="" + searchUrl + "" style="position: fixed; top: 0; bottom: 0;
left: 0; right: 0; height: 100%; width: 100%; z-index: 10000000;" frameborder="0"></iframe>';
document.getElementById('pudoSearchDialogue').innerHTML = iframe;
}
</script>
<script>
window.addEventListener('message', function(e)
{var message = e.data.split('^');
$('#is-sl-storeid').html(message[0]);
$('#is-sl-address').html(message[1]);
$('#is-sl-service').html(message[2]);
$('#is-sl-iframe').remove();})
</script>
</body>
</html>
```

5.3 Returned data

Once the user has selected their preferred store, the following tags are returned to the referring page.

Tag	Description
is-sl-address	Name & Address of the Selected Pickup Point
is-sl-storeid	Agent Pickup Point id
is-sl-service	The Service Code required for booking

The is-sl-address is given so you can show these on your website checkout page in order to show the customer that the shipment will be delivered to their selected store.

It is essential that the is-sl-storeid and is-sl-service are used when sending the booking to P2P. Currently a PUDO delivery booking is only available for customers that submit their data via FTP.

Please see the TrakPak FTP Integration Specification v1.5 document for full details of the file specification. For reference the is-sl-storeid should be supplied in field 26 and the is-sl-service should be supplied in field 28 and also field 16 of the PDF417 barcode.

Please note that you must not include the 'is-sl-address' in the manifest file sent to P2P or on the label. The consignee's personal address is still required as normal.

6. PUDO Destination Codes

6.1 PUDO Destination Code List

These are the destination codes. Select the required code depending on the agent / Country mix required.

Code	Country	Carrier(s)
AU	Australia	Parcelpoint
AT	Austria	Austria Post
BE	Belgium	Mondial Relais
FR	France	Mondial Relais
HK	Hong Kong	Royale 7/11 HK
IL	Israel	Israel Post
LU	Luxembourg	Mondial Relais
NL	Netherlands	PostNL
PT	Portugal	CTT
RU	Russia	Boxberry
ES	Spain	Correos
UA	Ukraine	Nova Poshta

Please note that the following Nordic countries do not support a door to door service and as such a store pickup service is used by default: Denmark, Finland, Norway and Sweden. These can be created as a normal shipment without the PUDO service code; the carrier will route the parcel to their nearest store and then get in touch with the consignee to arrange collection.
